The ${\sf engord}$ package

Heiko Oberdiek*

2016/05/16 v1.9

Abstract

The package generates the suffix of English ordinal numbers. It can be used with plain and LATEX formats.

1 Usage

$\end{\langle PTEX counter name \rangle}$

It prints the value of the LATEX counter as English ordinal number. It can be used in the same way as \arabic, \roman, or \alph. The command is not available in plain TeX.

```
\engordnumber \{\langle any \ T_FX \ number \rangle\}
```

It prints the number as English ordinal number.

```
\engordletters {#1}
```

This command formats the English ordinal letters after the number. It defaults to \textsuperscript.

\engorderror {#1}

It can be redefined, if an other error handling is wanted. The argument is a negative number or zero.

```
\engordraisetrue
\engordraisefalse
```

These commands set the switch \ifengordraise that is asked by the default \engordletters before raising the ordinal letters.

1.1 Package options

normal: \engordraisefalse

raise: \engordraisetrue

Default is raise.

1.2 Examples

• \usepackage[normal]{engord} \engordnumber{1} \rightarrow 1st

\engordnumber{12} \rightarrow 12th \engordnumber{123} \rightarrow 123rd

 \forall engord{page} \rightarrow 1st (if page has the value of one)

\engordraisetrue

\engordnumber{12} $ightarrow 12^{
m th}$

• The default output of a counter can be redefined:

```
\newcounter{mycounter}
\renewcommand{\theengcounter}{\engord{mycounter}}
```

• Because the implementation of \engord and \engordnumber is kept expandable, these commands can be used to make command names with an appropriate definition of \engordletters:

```
\renewcommand*{\engordletters}[1]{#1}
\@namedef{My\engordnumber{3}Command}{...}
```

This generates the command name '\My4rdCommand'. Since version 1.2 the redefinition can be dropped if the letters are not raised.

• If the letters should not be raised, use LATEX package option normal or use

```
\engordraisefalse
```

Also \engordletters could be redefined for this purpose:

```
\renewcommand*{\engordletters}[1]{#1}
```

2 Implementation

2.1 Reload check and identification

```
1 (*package)
Reload check, especially if the package is not used with LATEX.

```

2.3 User macros

\ifengordraise

The switch \ifengordraise, whether the ordinal letters are raised or not. Default is raised because of compatibility.

```
130 \ltx@newif\ifengordraise
```

131 \engordraisetrue

In LATEX this also can be controlled by option normal or raise.

```
132 \verb|\degingroup\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafter\expandafte
```

- 133 \expandafter\ifx\csname DeclareOption\endcsname\relax
- 134 \else
- 135 \DeclareOption{normal}{\engordraisefalse}%
- 136 \DeclareOption{raise}{\engordraisetrue}%
- 137 \ProcessOptions*\relax
- 138 \fi

\engordletters

\engordletters is called with one argument, the english ordinal letters, and contains the code to format them. It defaults to \textsuperscript depending on \ifengordraise.

```
139 \expandafter\ifx\csname engordletters\endcsname\relax
                               \EO@def\engordletters{%
                         140
                         141
                                 \ifengordraise
                         142
                                   \expandafter\engordtextsuperscript
                         143
                         144
                              }%
                         145 \fi
                         For plain TFX the definition is quite ugly, redefine \engordtextsuperscript if
\engordtextsuperscript
                         you have a better one.
                         146 \expandafter\ifx\csname engordtextsuperscript\endcsname\relax
                               \begingroup\expandafter\expandafter\expandafter\endgroup
                               \expandafter\ifx\csname textsuperscript\endcsname\relax
                         148
                                 \def\engordtextsuperscript#1{%
                         149

                         \engord expects a LATEX counter name as argument and calls \engordnumber. It
                         is defined only, if LATEX is used.
                         169 \begingroup\expandafter\expandafter\expandafter\endgroup

                         175 \fi
         \engordnumber
                         \engordnumber is the user command to print a number as english ordinal number.
                         The argument can be any TeX number like explicit numbers, register values, ...
                            In a safe way it converts the TEX number argument into a form that only
                         consists of decimal digits.
                         176 \EO@def\engordnumber#1{%
                         177
                               \expandafter\E0@number\expandafter{\number#1}%
```

2.4 Suffix generation

178 }

\EO@number \EO@number expects a number with decimal digits as argument and looks at the size of the number and the count of the digits:

```
179 \def\E0@number#1{%
                        \ifnum#1<1 % handle the error case

                 228
                       \fi
                 229 }
                 230 \EO@AtEnd\%
                 231 (/package)
```

3 Installation

3.1 Download

Package. This package is available on CTAN¹:

CTAN:macros/latex/contrib/oberdiek/engord.dtx The source file.

CTAN:macros/latex/contrib/oberdiek/engord.pdf Documentation.

Bundle. All the packages of the bundle 'oberdiek' are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

CTAN:install/macros/latex/contrib/oberdiek.tds.zip

TDS refers to the standard "A Directory Structure for TEX Files" (CTAN:pkg/tds). Directories with texmf in their name are usually organized this way.

3.2 Bundle installation

Unpacking. Unpack the oberdiek.tds.zip in the TDS tree (also known as texmf tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

3.3 Package installation

Unpacking. The .dtx file is a self-extracting docstrip archive. The files are extracted by running the .dtx through plain T_EX :

```
tex engord.dtx
```

¹CTAN:pkg/engord

TDS. Now the different files must be moved into the different directories in your installation TDS tree (also known as texmf tree):

```
engord.sty \rightarrow tex/generic/oberdiek/engord.sty engord.pdf \rightarrow doc/latex/oberdiek/engord.pdf engord.dtx \rightarrow source/latex/oberdiek/engord.dtx
```

If you have a docstrip.cfg that configures and enables docstrip's TDS installing feature, then some files can already be in the right place, see the documentation of docstrip.

3.4 Refresh file name databases

If your T_EX distribution (T_EX Live, MiKT_EX, ...) relies on file name databases, you must refresh these. For example, T_EX Live users run texhash or mktexlsr.

3.5 Some details for the interested

Unpacking with LATEX. The .dtx chooses its action depending on the format: plain TEX: Run docstrip and extract the files.

LATEX: Generate the documentation.

If you insist on using LATEX for docstrip (really, docstrip does not need LATEX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{engord.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the .dtx or the .drv to generate the documentation. The process can be configured by the configuration file ltxdoc.cfg. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfIATEX:

```
pdflatex engord.dtx
makeindex -s gind.ist engord.idx
pdflatex engord.dtx
makeindex -s gind.ist engord.idx
pdflatex engord.dtx
```

4 History

[2000/05/23 v1.0]

• First public release, published in newsgroup de.comp.text.tex: "Re: Ordinalzahlen in LaTeX?" ²

[2003/04/28 v1.1]

- Bug fix for $30, 40, 50, \ldots, 100, 130, \ldots$
- \ordletters renamed to documented \engordletters.

²Url: https://groups.google.com/group/de.comp.text.tex/msg/738e2cb4c51759d6

[2006/02/20 v1.2]

- Support for plain TEX.
- Switch \ifengordraise added.
- Package options raise and normal added.
- DTX framework.

[2007/04/11 v1.3]

• Line ends sanitized.

[2007/04/26 v1.4]

• Use of package infwarerr.

[2007/09/09 v1.5]

• Catcode section added.

[2007/09/20 v1.6]

• Short description fixed (George White).

[2008/08/11 v1.7]

- Code is not changed.
- URLs updated.

[2010/03/01 v1.8]

• Compatibility with iniTeX.

[2016/05/16 v1.9]

• Documentation updates.

5 Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; plain numbers refer to the code lines where the entry is used.
